

The Minnesota Insealators Icynene Advantage

APPLICATION CASE STUDY:

EFFECTIVELY INSULATE AND AIR SEAL A BASEMENT AREA THAT HAD PREVIOUS INDOOR MOISTURE ISSUES

After a remodeler and the homeowner of this home in Buffalo, MN discovered mold in some areas of their basement they decided they needed to remove the fiberglass insulation and replace it with something that would not only insulate but also seal out the moist air to prevent condensation from forming in the exterior walls. They called Minnesota Insealators, Inc. for advice. Minnesota Insealators has been spraying the Icynene Insulation System® since 1997, and has assisted hundreds of homeowners in effectively sealing basements and creating comfortable, draft free, warm, dry and quiet living areas. The photos above show how Icynene was applied to fill in all cracks and around pipes. The homeowner also decided to take the extra step and have the ceiling over the new master bedroom sprayed with Icynene for sound control. The basement area now is warm and comfortable and provides a quiet refuge for the owners to relax in.
