

The Minnesota Insealators Icynene Advantage

APPLICATION CASE STUDY:

EFFECTIVELY INSULATE AND AIR SEAL AN OLDER HOME UNDER COMPLETE RENOVATION

This century old home near Plato, MN was undergoing its second transformation. Originally a church, it was moved to its present site many years ago and converted into a farm home. When new owners purchased the home they decided it needed to be completely renovated. The entire interior was stripped to the bare studs. Icynene foam was selected to seal the old leaky structure. Minnesota Insealators sprayed Icynene to 95% flush cut into the walls and ceilings sealing the home to where it will **outperform most new homes** that utilize fiberglass insulation. Minnesota Insealators has assisted hundreds of home owners and remodelers since 1997 in restoring old buildings. Homes sealed with The Icynene Insulation system® exhibit a **healthy indoor air environment** due to dust, pollens and mold spores being sealed out. Icynene® insulated homes are much more energy efficient and can **save up to 50% on energy costs**. These homes are also quiet, comfortable, and draft free.

Contact us for more information on healthy, quiet, comfortable, energy efficient remodeled houses.
